

# Leet Alert — product scope (PM / PO)

App: [alert.theleetclub.com](https://alert.theleetclub.com) · Repo: [apps/alert-theleetclub-com/](https://github.com/apps/alert-theleetclub-com/)

Refresh PDF: `npm run doc:pdf (commit md + figures/wire-*.svg + PRODUCT-PROTOTYPE.pdf )`.

Shipped UI has no “prototype” wording — wireframes are documentation only.

## Routes & capabilities

| Route              | Area            | What users get                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| /                  | Entry           | Redirect to <b>Red Flags</b> (no Home tab).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| /login             | Login           | Google sign-in.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| /red-flags         | Red Flags       | Compare presets; table + cards; <b>Live operator</b> — Task Manager name in metric box + attendance badge (Late / Absent / Missing); column <b>not sortable</b> ; <b>one tap</b> → schedule + <b>icon-only</b> contacts (no email/phone in table or modal body). <b>Last / tx</b> — weekday + date + time (3 lines; sortable via Vendon timestamp). Sales / Target / Trend / QA popups; fleet bar on Today vs Yesterday adds <b>Yest. full day</b> KD + <b>–2d full day</b> KD + <b>vs –2d %</b> . Last clean + tech visit use snapshot/SafetyCulture.     |
| /overall           | Overall         | Workbook columns; <b>sortable headers</b> (↕/▼/▲) on all columns with real data; <b>Operator Activity</b> column; <b>Attendance</b> from Task Manager ( GET /api/alert/workflow/machine-attendance-map + tap → operator-schedule modal); <b>Sales</b> uses GET /api/alert/overall/daily-sales-elapsed — <b>Today vs Yesterday</b> or <b>Yesterday vs Day Before</b> per compare preset; ...                                                                                                                                                                |
| /qa-visit          | QA Visit        | <b>Standalone ops tab</b> : fleet overview with <b>date range</b> + <b>searchable machine dropdown</b> → machine workspace (filters carry over), KPI strip, trend, history, findings tabs, PDF. Separate from Red Flags cell popup.                                                                                                                                                                                                                                                                                                                        |
| /performance       | Performance     | <b>Sales vs target graphs</b> (Targets Areas parity): <b>Performance Trajectory</b> (up to 12 lines) with < > <b>page</b> through all machines, series chips to hide/show, and <b>Customize graph</b> (pick any ≤12, e.g. top + lowest). Locations = searchable dropdown (Select all loads full fleet in batches). Dashed <b>Avg daily target</b> ; <b>Performance charts</b> grid; single machine → Revenue / Product trajectory. Presets WTD/MTD/...; Product cups optional. Banner when no Admin/sheet targets. Red Flags <b>Target</b> = today % only. |
| /promo · /v2/promo | Promo           | <b>Campaign cups</b> by location: date range → daily achieved/remaining bars (default product <b>Americano Max</b> ). Same <code>target_promo_*</code> tables as Targets site. Configure under <b>Admin</b> → <b>Promo</b> (not Admin → Targets). Swipe instruments still on Performance + Area owners / Promo admin.                                                                                                                                                                                                                                      |
| /admin → Targets   | Admin · Targets | Location target once (KD or cups). Promote <b>1..N Vendon products</b> , each with its own target. Fleet table = <b>one row per location</b> (expand for products). Cached sales <b>insights</b> (avg / last week / suggest) on hover-click.                                                                                                                                                                                                                                                                                                               |
| /admin → Promo     | Admin · Promo   | Product assignment (owner or machine), calendar <b>day cup targets</b> , swipe instrument names. Separate from KD/SX Targets.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| /v2 ... /v2/*      | <b>Alert v2</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Route               | Area  | What users get                                                                                                                                                                                                                                                               |
|---------------------|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                     |       | Pure Manus <b>Fleet Intelligence</b> UI with <b>full Classic workbook fields</b> (Red Flags / Overall / QA / Performance / Promo) in Manus tables/cards — no Classic Stitch chrome. Classic + Pro at <code>/</code> . Login <code>/v2/login</code> .                         |
| <code>/admin</code> | Admin | User-entered data <b>not on Vendon. Machines</b> (cleaning, operators, hours), <b>Targets</b> (location KD + SX product cups + period), <b>Promo</b> (campaign cups), <b>Area owners</b> , <b>QA visit</b> , <b>Who can use Alert</b> , <b>My access</b> , <b>Advanced</b> . |

### Permissions (summary)

**people-api** rules (same store as Monitor): view → Red Flags + Overall + **QA Visit** + **Performance** + **Promo**; **leetAlertAdmin** → Admin and edit **Who can use Alert** (same session rules API as Monitor **admin**); optional Monitor grid in **Advanced**. Adding people is limited to your Google Workspace domain(s): env `ACCESS_ALLOWED_EMAIL_DOMAINS` / `DASHBOARD_ACCESS_EMAIL_DOMAINS` , else the signed-in admin’s domain. No entitlements → **No access** after sign-in until an admin grants access.

### Visual UI prototype (figures 0–4)

Aligned with current React shell ( `App.tsx` ), Home (“Choose a workspace”), and Admin vertical sections ( `AdminPage.tsx` ).

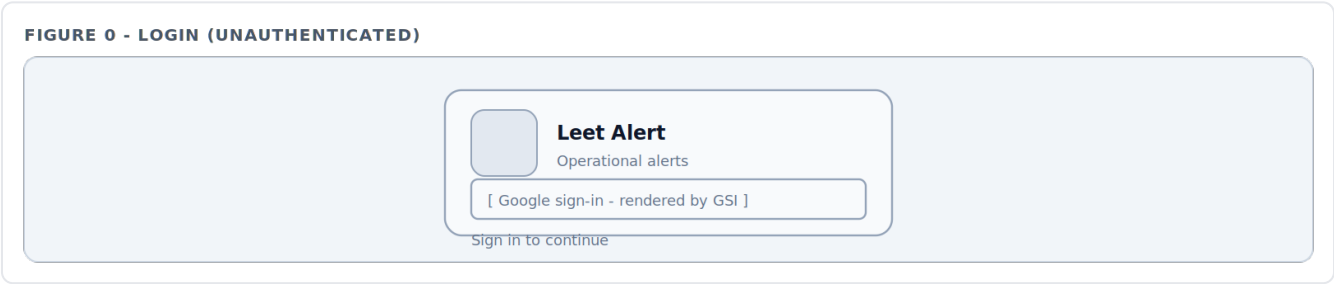

Figure 0 — Login

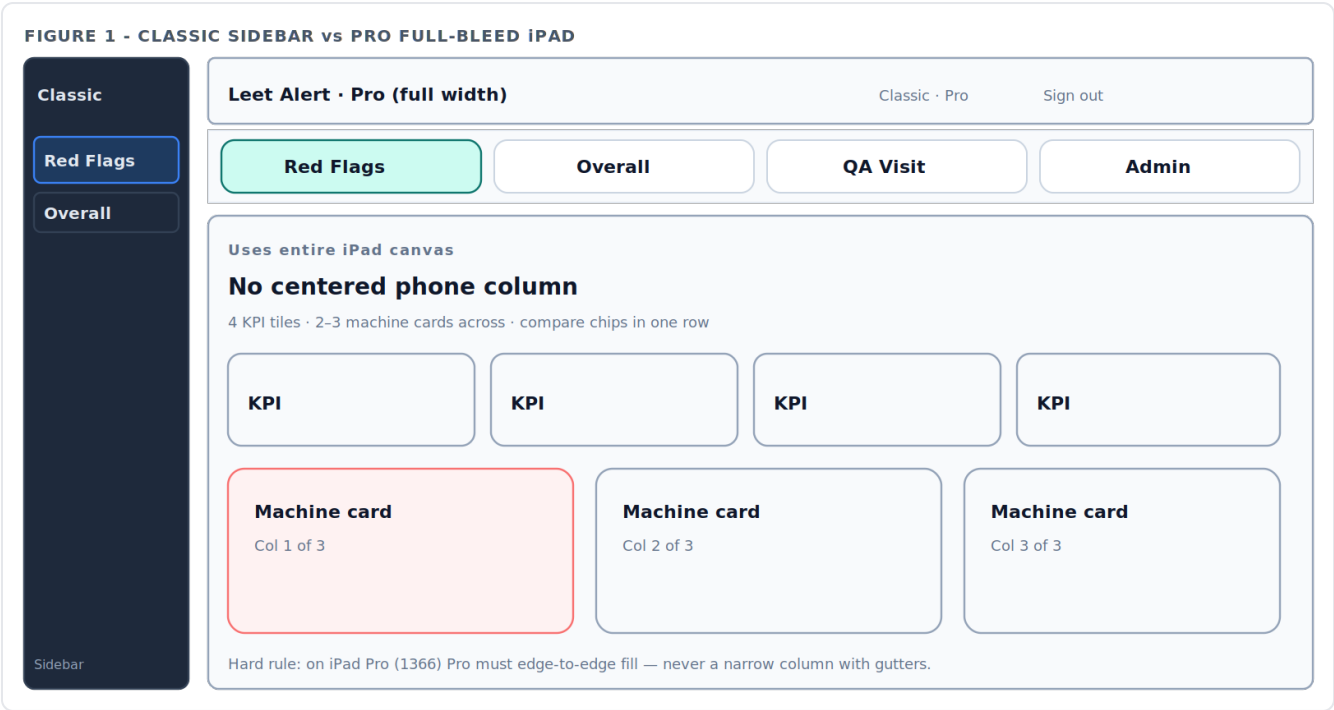

Figure 1 — Classic: coral Stitch sidebar. Pro: light iPad tab strip (unchanged). v2 ( /v2 ): Manus Fleet Intelligence pages — separate from Pro (see figure 7).

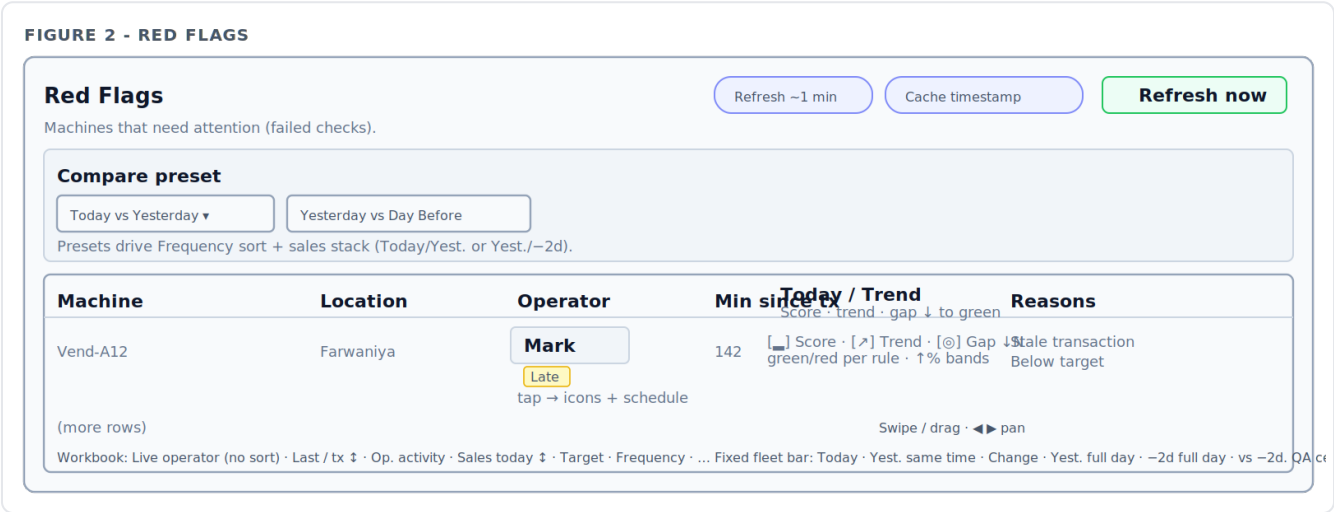

Figure 2 — Toolbar, compare preset, table.

Figure 3 — Same compare pattern; fleet table.

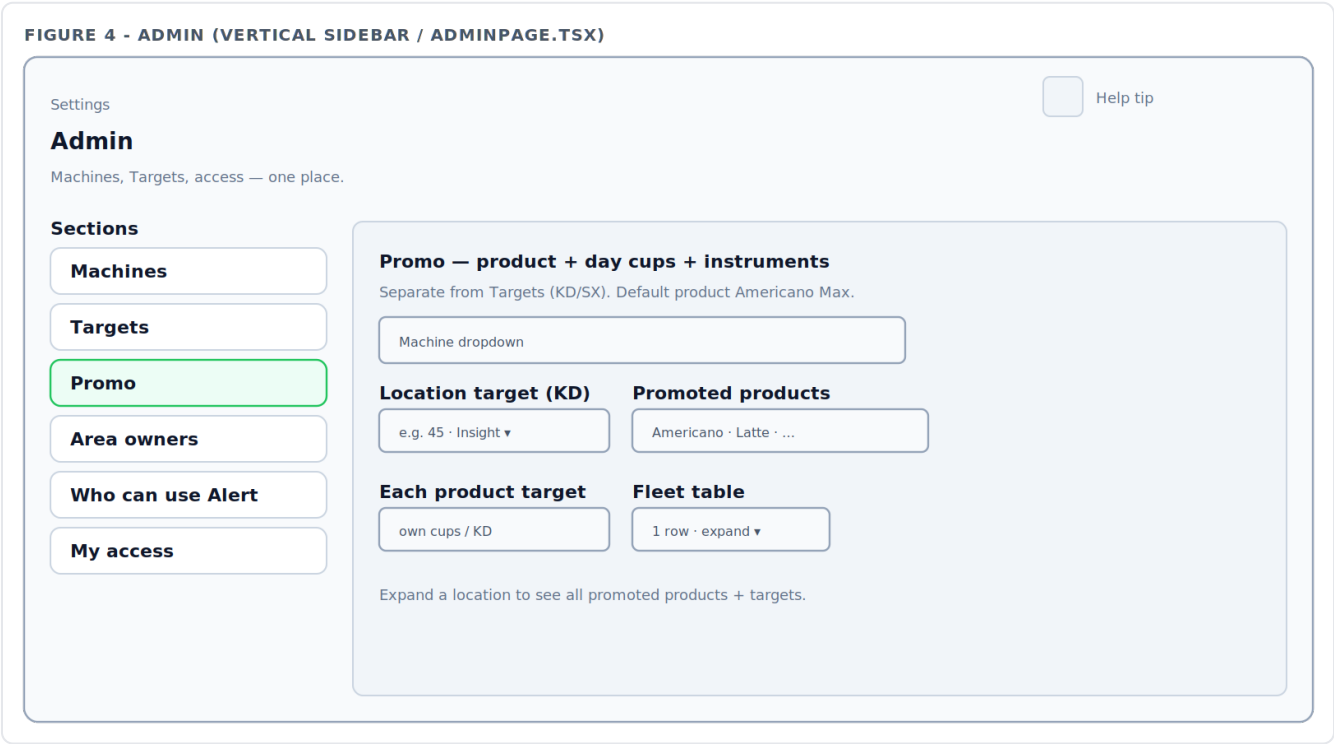

Figure 4 — Settings header; Sections sidebar includes Targets (location KD + SX product) separate from Machines.

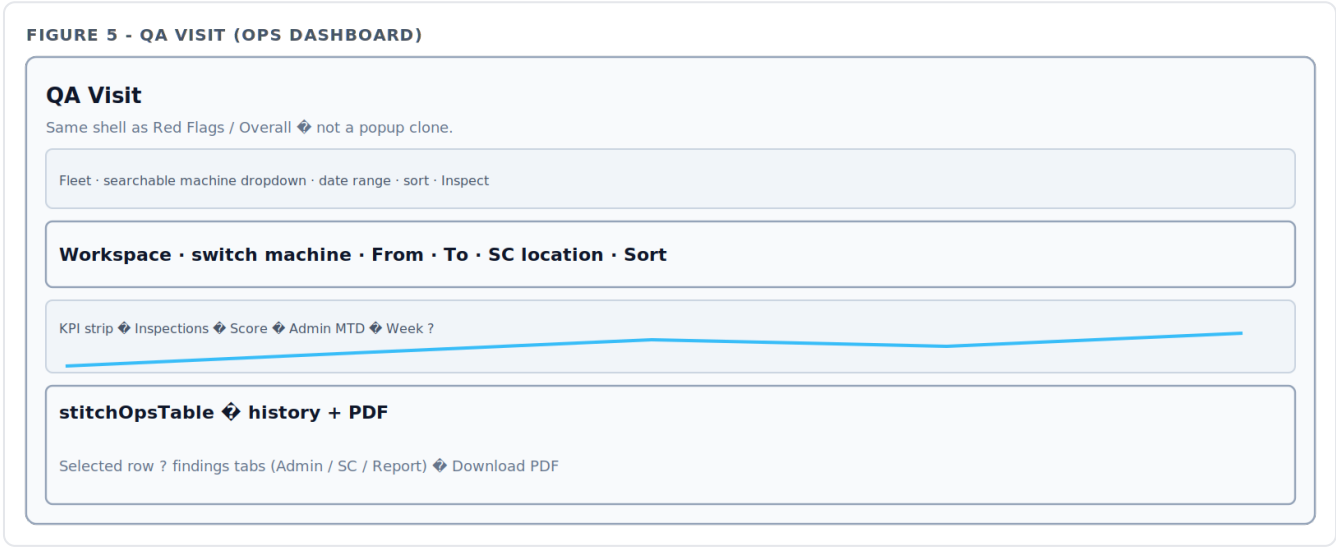

Figure 5 — QA Visit fleet / machine workspace.

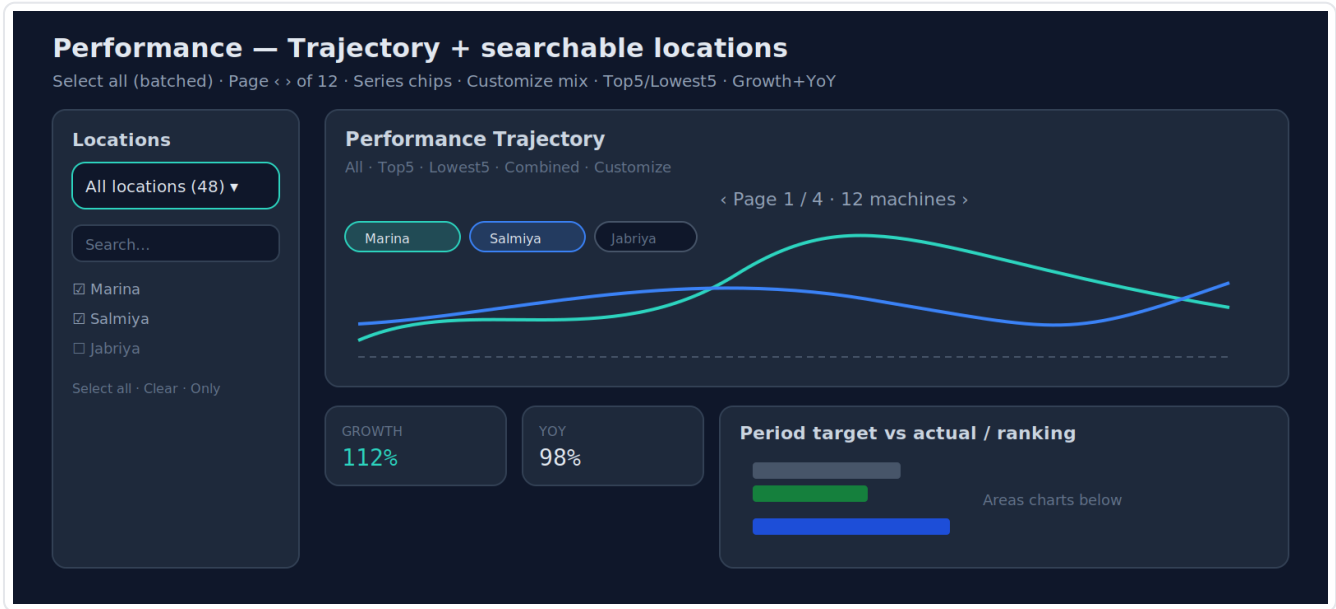

Figure 6 — Performance: searchable locations, Performance Trajectory (page of 12 + customize), Areas charts.

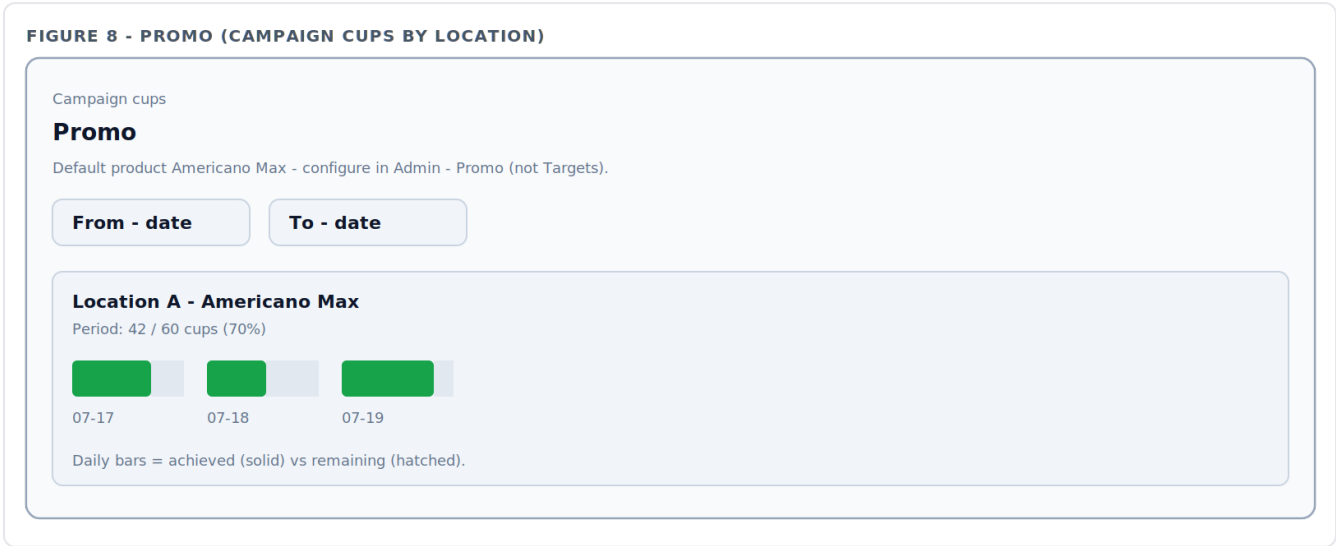

Figure 8 — Promo: date range + location cup bars (Admin → Promo configures targets).

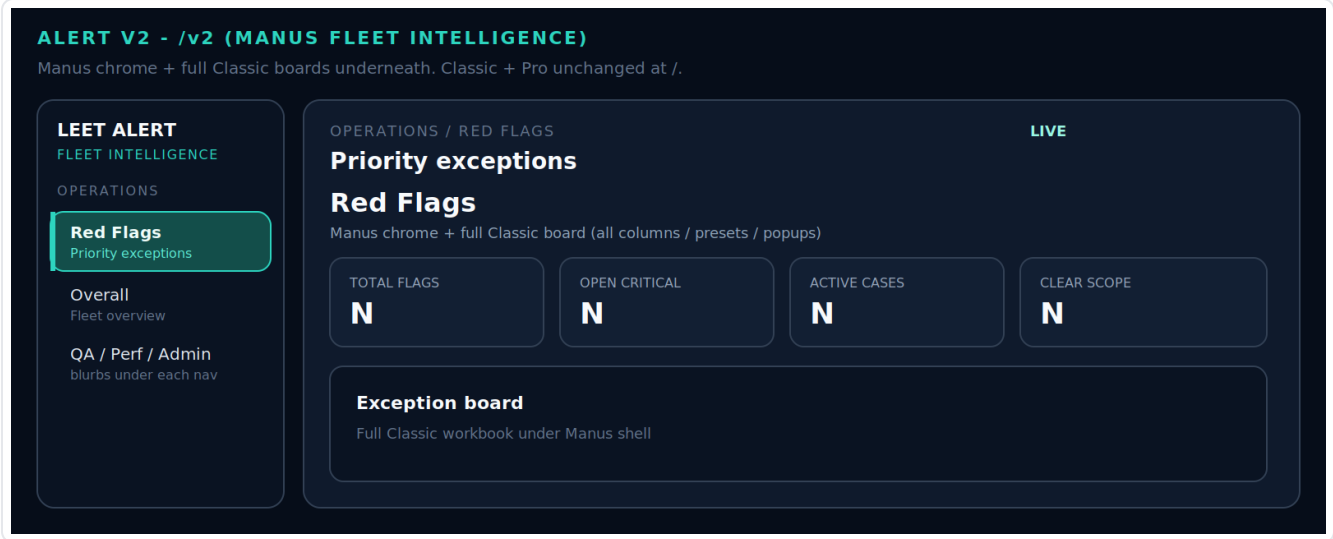

Figure 7 — Alert v2 ( /v2 ): Manus Fleet Intelligence chrome + full Classic boards underneath. Not Pro.

Composite SVG (all panels): docs/product-prototype/visual-prototype.svg

## PO quick facts

- Lists refetch ~1 min; **Refresh now** on each screen.
- Admin order: **Machines** → **Targets** → **Promo** → **Area owners** → **QA visit** → **Who can use Alert** → **My access** → **Advanced** (team tab only if org admin).

## Planned additions (roadmap)

Full spec: [ALERT-ROADMAP.md](#) (2026-06-17 PM intake).

| Area                 | Summary                                                                                                                            | Status                                                                                                                                                                                                                                                    |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| QA column            | Last visit + <b>score chip</b> ; <b>QA Visit tab</b> for full fleet/history/filters/trend/PDF; cell popup = full modal (unchanged) | <b>Shipped</b> — /qa-visit + GET /api/alert/qa/machine-audits                                                                                                                                                                                             |
| Target column        | Beside sales: today % + remaining; popup WTD vs prior week                                                                         | <b>Shipped</b> — snapshot dailyTarget + area-owner box + GET /api/alert/targets/machine-detail                                                                                                                                                            |
| Cleaning 15h alert   | Overdue-not-cleaned notification + red-zone UI                                                                                     | <b>Shipped</b> — cleaningOverdue15h red row (table, cards, Overall); banner + optional browser notification; <b>alert icon</b> on Last clean opens <b>AI-style operator message preview</b> (Slack DM, Email, WhatsApp, Workflow Received — preview only) |
| Sorting              | Sales today/month; QC latest/oldest                                                                                                | <b>Shipped</b> — Data columns sortable (⌵/⬆/⬆, third click clears); <b>Live operator</b> and other action-only columns excluded; <b>Last / tx</b> uses Vendon ISO timestamp                                                                               |
| Operator last access | Last door open / machine access time                                                                                               | <b>Shipped</b> — <b>Operator Activity</b> column ( operatorLastAccessAt ); Live operator column = <b>name box + attendance badge only</b> (contacts in modal icons)                                                                                       |

| Area                       | Summary                                                     | Status                                                                                                                                                                                                                                 |
|----------------------------|-------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Tech visit                 | Leet Workflow last visit + comment popup                    | <b>Partial</b> — SafetyCulture fallback + Workflow scaffold ( GET / api/alert/workflow/tech-visit )                                                                                                                                    |
| Leet Workflow — Attendance | Task Manager schedule + punch status on Overall + Red Flags | <b>Shipped</b> — active schedule period → operator per machine; badge (Late yellow / Absent red / <b>Missing</b> when not scheduled); tap opens MTD modal ( operator-schedule ); fleet map fetched in <b>batches of 24</b> machine IDs |
| Leet Workflow — other      | Cleaning, GO CHECK, Call OP DM, tech visit                  | <b>GO CHECK</b> sends Slack DM to scheduled operator (TM Received inbox API pending). Cleaning/Call OP still scaffolded.                                                                                                               |

## Changelog

| Date (UTC) | Summary                                                                                                                                                                                                                                                                                                                                                                                              |
|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2026-07-19 | <b>Promo Phase 1 on Alert:</b> New <b>/promo</b> and <b>/v2/promo</b> tab (daily achieved/remaining cup bars; default Americano Max). <b>Admin</b> → <b>Promo</b> for product assignment + calendar day targets + instruments (separate from Targets KD/SX). people-api aliases <b>/api/alert/promo/assignments</b> , <b>/day-targets</b> , <b>/performance</b> sharing <b>arget_promo_*</b> tables. |
| 2026-07-18 | <b>Performance growth KPIs clearer:</b> Big number is signed <b>Growth</b> (+/-%). Labels <b>vs prior period</b> / <b>vs same dates last year</b> (not “% of last year” — that implied full-year YTD). Index (period ÷ compare) stays as secondary.                                                                                                                                                  |
| 2026-07-18 | <b>Performance layout polish:</b> Locations is a compact top bar (no empty sidebar). PNG sits in the Trajectory header (not over the legend). Page < > flank the chart left/right. <b>Mix machines</b> modal: Top6+Lowest6, ranks, search — combine any machines across pages without duplicate chips.                                                                                               |
| 2026-07-17 | <b>Performance dropdown names + legend arrows:</b> Locations dropdown shows location <b>names</b> (fixed empty labels). Removed duplicate series chip buttons; use the chart legend (line icons) with clearer <b>scroll</b> < > for all series on the page, plus page < > for the next 12 machines.                                                                                                  |
| 2026-07-17 | <b>Performance names not IDs:</b> Fleet batches with <b>machineIds</b> were labeling charts with raw Vendon IDs (name map skipped). API resolves/caches Vendon names again; UI overlays names from <b>/api/alert/machines</b> . Locations dropdown shows <b>names only</b> .                                                                                                                         |
| 2026-07-17 | <b>Performance Trajectory UX:</b> Locations = searchable dropdown; Select all loads <b>all</b> machines via batched fleet fetches. Graph renamed <b>Performance Trajectory</b> — default All shows top <b>12</b> by sales with < > pages; series chips toggle lines; <b>Customize graph</b> picks any ≤12 from full list. API <b>machineIds</b> batch size 30 / server max 120 per request.          |
| 2026-07-17 | <b>Performance location cap 24 → 48:</b> Multi-select / API <b>machineIds</b> max raised to <b>48</b> (same as auto top-revenue load). Chart “All machines” still plots top <b>12</b> lines for readability.                                                                                                                                                                                         |
| 2026-07-17 | <b>Performance growth + combined line:</b> Growth KPI follows All/Top5/Lowest5 (by sales); click opens popup with all three groups + per-machine table. New <b>YoY growth</b> KPI (same dates last year) with the same popup. <b>Combined line</b> toggle sums shown machines into one trajectory.                                                                                                   |
| 2026-07-16 | <b>Performance Overview (Classic /performance ):</b> Top 5 / Lowest 5 ranked by <b>period sales KD</b> (not % of target). Hover tooltip: green/red <b>day Δ ▲/▼ +x%</b> and colored % of target. Same board on <b>/v2/performance</b> .                                                                                                                                                              |
| 2026-07-15 |                                                                                                                                                                                                                                                                                                                                                                                                      |

| Date (UTC) | Summary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <b>Performance target discoverability:</b> Clarified that sales-vs-target <b>graphs</b> are on <code>/performance</code> (not Red Flags tables). Status banner when fleet has sales but zero configured targets (Admin → Targets or weekly sheet).                                                                                                                                                                                                                                                                                                                                   |
| 2026-07-18 | <b>Performance growth labels:</b> KPI boxes show <b>% of prior period / % of last year</b> (index) plus signed <b>Growth</b> (e.g. 98.8% → -1.2%). Compare modal shows both columns. Classic/Pro/ <code>/v2</code> share the same board.                                                                                                                                                                                                                                                                                                                                             |
| 2026-07-15 | <b>Alert v2 Classic boards for data+popups:</b> <code>/v2</code> Red Flags & Overall mount Classic pages with <code>variant=manus</code> (same APIs, cells, sales/trend/target/QA/cleaning/detail popups as <code>/</code> ). Thin Manus-only tables removed from those routes. Classic/Pro untouched.                                                                                                                                                                                                                                                                               |
| 2026-07-15 | <b>Alert v2 login full-bleed:</b> Login is edge-to-edge split (hero + sign-in rail), not a shrunk centered card; cancels body safe-area inset. Classic/Pro untouched.                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2026-07-15 | <b>Alert v2 login + iPad responsive:</b> Login redesigned (brand, adaptive Google button, card-first on tablet). Shell drawer through 1199px (iPad Pro landscape), KPI/filters/Performance stack on tablet; safe-area + overflow-x fixes. Classic/Pro untouched.                                                                                                                                                                                                                                                                                                                     |
| 2026-07-15 | <b>Alert v2 Classic parity pass:</b> Red Flags/Overall load the same enrichment APIs as Classic (incidents, last-tx, compare vendon/SX, attendance, cleaning). Rank uses <code>rankRows</code> (tier 1 critical first + freq mode from compare preset). Performance + QA Visit mount full Classic boards with <code>variant=manus</code> . Classic/Pro untouched.                                                                                                                                                                                                                    |
| 2026-07-15 | <b>Alert v2 scroll + metric boxes:</b> Workbook tables get <code>← →</code> / drag pan, sticky machine column overlap fixes, and Manus mini metric boxes (sales/trend/SX/freq/target) matching Fleet Intelligence look. Classic/Pro untouched.                                                                                                                                                                                                                                                                                                                                       |
| 2026-07-15 | <b>Alert v2 full workbook in Manus:</b> All Classic Red Flags / Overall / QA / Performance fields rendered as Manus data tables. No Classic Stitch/ops UI.                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2026-07-15 | <b>Alert v2 = Manus page layouts:</b> <code>/v2</code> Manus Fleet Intelligence chrome. Classic + Pro untouched.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2026-07-14 | <b>QA Visit missing same-day SC audits (real root cause):</b> SafetyCulture <code>/audits/search</code> defaults to <code>order=asc + limit=100</code> and has <b>no <code>next_page_token</code></b> . Code only fetched the oldest 100 audits per window, so <b>14 Jul KU CBA</b> (exact site label, match score 100) never entered the pipeline while older visits (1 Jul / 9 Jul) did. Fix: <code>order=desc</code> , <code>limit=1000</code> , cursor-paginate via <code>modified_before</code> . Fleet date filter uses <b>Asia/Kuwait</b> day from <code>lastVisitAt</code> . |
| 2026-07-14 | <b>QA Visit KU CBA / recent visits:</b> SC short site labels (e.g. <code>CBA → KU CBA</code> ) now match. Scored location inspections count as QC even when officer ≠ Ismail. Alias map <code>config/qa_machine_aliases.json</code> . Busts QA caches. Fixes Alert showing 1 Jul while SC shows 14 Jul.                                                                                                                                                                                                                                                                              |
| 2026-07-14 | <b>QA Visit freshness + matching:</b> SafetyCulture search now <b>globally sorts newest-first</b> before capping; last <b>14 days</b> of audits are fully processed (no truncating). Richer location keys (site + machine header fields), softer QC detect for scored inspections, shorter caches (~2–3 min). Fixes missing same-day / same-site reports and stale 2–3 day lag.                                                                                                                                                                                                      |
| 2026-07-14 | <b>QA Visit freshness + same-site matching:</b> Visit timestamps prefer completed/modified over created (fixes “2–3 days old”). Date filters use <b>Asia/Kuwait</b> day bounds. SC search widens by <code>modified_at</code> pad so late finishes appear. Sibling machines at one site: exclusive best-match (no shared stolen visits). Shorter QA caches (~90s) + quicker client refetch.                                                                                                                                                                                           |
| 2026-07-15 | <b>Light / Dark for Classic + Pro:</b> Independent color mode toggle (Light · Dark) beside Classic · Pro. Tokens/fonts/surfaces follow <code>data-mode</code> . Defaults: Classic → dark, Pro → light until user picks.                                                                                                                                                                                                                                                                                                                                                              |
| 2026-07-15 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Date (UTC) | Summary                                                                                                                                                                                                                                                                                                                                                                             |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <b>Alert v2 at /v2</b> : New Manus fleet-intelligence shell (sidebar blurbs, breadcrumbs, LIVE, <code>/v2/login</code> ). Classic + <b>Pro restored</b> (light iPad). Same production pages/APIs under <code>/v2/red-flags</code> etc.                                                                                                                                              |
| 2026-07-15 | <b>Targets multi-product + insights + Performance filter</b> : Each promoted product keeps its own target (JSONB <code>flag_modified</code> ). Fleet targets expand per location. <code>GET /api/alert/admin/target-insights</code> (5 min cache). Performance: Clear always + Only-this; Top/Lowest/All only when full fleet (or >5 selected).                                     |
| 2026-07-15 | <b>Performance overview + speed</b> : Line trajectory (Top/Lowest 5 / All) · period presets · deficit / achievement / growth KPIs · fleet API uses revenue cache + <code>includeProducts=0</code> by default. Admin select chevrons / alignment tightened.                                                                                                                          |
| 2026-07-14 | <b>Admin → Targets tab</b> : Location KD + SX product + cups target moved out of Machines into a dedicated <b>Targets</b> section (fleet table + form). Multi-product from Vendon + cups/revenue metric.                                                                                                                                                                            |
| 2026-07-14 | <b>Performance product multi charts</b> : Fleet API loads promoted-product cups; multi-select shows cups target vs actual, product ranking, daily + cumulative cups alongside location KD.                                                                                                                                                                                          |
| 2026-07-14 | <b>Performance graphs (Targets Areas parity)</b> : Always-on multi chart grid — target vs actual, ranking, daily + cumulative · PNG export. Filter → KPIs → charts.                                                                                                                                                                                                                 |
| 2026-07-14 | <b>Performance multi-select graphs (Targets Areas style)</b> : Location checkbox filter · Ranking / Compare / Aggregate chart modes · <code>GET /api/alert/performance/fleet</code> . Single machine still opens detail (product trajectory, SX, promo).                                                                                                                            |
| 2026-07-14 | <b>Performance charts (ECharts)</b> : Replaced crude SVG bars with professional <b>Revenue Trajectory</b> , <b>Product Trajectory</b> , and <b>Day growth rates</b> charts (tooltips, stacked achieved/remaining, target line, dual growth lines).                                                                                                                                  |
| 2026-07-13 | <b>CSP + Performance machines + Promo swipe</b> : Theme boot moved to <code>/theme-boot.js</code> (no inline script). Performance machine list falls back to Red Flags snapshot. <b>Promo instruments</b> on Performance (swipe deck + cup Δ vs yesterday); Admin → Area owners configures names. Area-owner/promo tables queried from <code>people_analytics</code> .              |
| 2026-07-13 | <b>Performance + SX fix</b> : New <code>/performance</code> tab — Revenue Trajectory (Loc KD + product cups vs targets), growth table, SX KPIs. SX cell shows Loc/Prod amounts + pts; tap opens Performance for that machine. Admin: <b>target period</b> daily/weekly/monthly; default product <b>Americano Max</b> . API <code>GET /api/alert/performance/machine-detail</code> . |
| 2026-07-13 | <b>Op. activity compact + no metric ellipsis</b> : Stamp is <code>06 July 26 12:48</code> (Kuwait); column narrowed (~7.5rem). Metric % values no longer force <code>...</code> truncation (wider boxes).                                                                                                                                                                           |
| 2026-07-13 | <b>Metric boxes contain text</b> : Frequency / Sales trend / YoY / SX no longer spill past box borders (overflow: hidden + ellipsis). Slightly wider stack boxes (4.5rem). Full value still on hover title where set.                                                                                                                                                               |
| 2026-07-13 | <b>Table sticky Call OP/AM</b> : Fixed Call OP clipped under Call AM while mid-scroll — sticky widths + right offset matched (fits Suhaib/Ahmed); AM paints above OP. Contained Op. activity / sticky label overflow with ellipsis.                                                                                                                                                 |
| 2026-07-13 | <b>Operator Activity — kind visible</b> : Last-touch cell shows <b>Clean / Refill / Credit / Door</b> on the cell (not hover-only), plus relative time + Kuwait date. Pro Red Flags + Overall cards show the same kind.                                                                                                                                                             |
| 2026-07-13 | <b>Operator Activity — single last touch</b> : Column shows only the <b>most recent</b> op activity (from cleaning / refill / remote credit / door) as relative time + Kuwait date. Hover shows which type.                                                                                                                                                                         |

| Date (UTC) | Summary                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2026-07-13 | <b>Operator Activity — four last-touch lines:</b> Clean (Attendance & Cleaning end), Refill (Vendon All Products refilled), Credit (proven remote credit), Door (door opened). API <code>GET /api/alert/operator-activity</code> . Sort by newest of the four.                                                                                                                                                                                                 |
| 2026-07-13 | <b>Pro fills the iPad (not a phone column):</b> Removed centered 1100px shell. Full-bleed header/tabs/main on tablet. 4 KPI cols + 2–3 card cols from 768px up. Horizontal tab labels. Email hidden on tablet so Sign out never clips. Classic unchanged.                                                                                                                                                                                                      |
| 2026-07-13 | <b>Pro iPad-native shell:</b> Full-width <b>tab strip</b> under brand (visible on iPad portrait/landscape; hamburger only <640px). <b>48px</b> touch targets, safe-area insets, <b>ProCompareChips</b> (large preset buttons), 2-col card grid on tablet, full-width card actions in portrait, sticky fleet bar with home-indicator padding. Classic unchanged.                                                                                                |
| 2026-07-13 | <b>Pro = dedicated iPad workspace (real refactor):</b> New <code>features/pro/</code> UI — card pages for Red Flags + Overall (not Classic Stitch chrome). Shared data/queries; Pro-only layout, KPIs, metrics, fleet bar. Shell stays top app bar. Classic unchanged.                                                                                                                                                                                         |
| 2026-07-13 | <b>Pro iPad readability:</b> High-contrast light tokens... <i>(superseded same day by dedicated Pro pages above).</i>                                                                                                                                                                                                                                                                                                                                          |
| 2026-07-13 | <b>Pro = light professional workspace (real layout):</b> Separate React shell — <b>top app bar</b> with brand + horizontal tabs (no sidebar), soft white cards, teal accents, Manrope. Classic keeps dark tactical sidebar Stitch. Toggle Classic · Pro.                                                                                                                                                                                                       |
| 2026-07-15 | <b>QA Visit — reliability + co-located machines:</b> Location-only SC site visits now attribute to <b>all matching fleet machines</b> (siblings no longer starved by exclusive award). Title/header machine fields drive exclusive match. Default fleet range <b>90 days</b> ; ingress <b>300s</b> timeout; partial SC scans surface <b>warning + Retry</b> (not silent empty).                                                                                |
| 2026-07-15 | <b>QA Visit — SC pagination + errors:</b> people-api paginates SafetyCulture search at the real <b>100/page cap</b> (fixes missed recent visits in dense windows). Summary scan uses chunked windows. Fleet tab surfaces API errors instead of silent empty tables.                                                                                                                                                                                            |
| 2026-07-13 | ~~Pro bold dark command~~ superseded same day — was still perceived as a skin; replaced by light professional shell above.                                                                                                                                                                                                                                                                                                                                     |
| 2026-07-13 | <b>Fleet revenue labels (clarity):</b> Secondary strip labels <b>Yest. full day</b> (KD), <b>–2d full day</b> (KD amount for day-before-yesterday), <b>vs –2d</b> (%). Dropped stacked sub-labels that read like “no amount for –2d”.                                                                                                                                                                                                                          |
| 2026-07-13 | <b>Fleet revenue labels:</b> Secondary strip shows <b>Yesterday full day</b> KD, <b>Day before (–2d) full day</b> KD, and <b>Change (yest. vs –2d)</b> — mirrors primary/baseline/change so –2d amount is visible (was % only).                                                                                                                                                                                                                                |
| 2026-07-12 | <b>UI themes Classic / Pro v2:</b> Toggle in top bar + login (persisted). <b>Classic</b> = current tactical Stitch look. <b>Pro v2</b> = command-floor restyle (midnight steel, teal signal accents, Sora + IBM Plex Mono, glass top bar / fleet bar). Compare and pick; default remains Classic.                                                                                                                                                              |
| 2026-07-10 | <b>Fleet revenue — Yest. full day:</b> On Today vs Yesterday, the secondary strip compares <b>full yesterday vs full day-before (–2d)</b> from the revenue cache (not vs partial today). Label <b>vs –2d</b> . Main bar still uses same-elapsed today vs yesterday.                                                                                                                                                                                            |
| 2026-07-10 | <b>Sales Acceleration (SX):</b> New Red Flags column <b>SX</b> (Loc · Prod) — YoY-style lead pts + dual stack. Formula: $\text{growth} = (\text{cur} - \text{prev}) / \text{prev}$ ; $\text{SX} = G_{\text{current}} - G_{\text{previous}}$ . Same compare presets as Sales. Admin: location daily KD target (overrides week default) + <b>SX product</b> name + <b>product cups/day</b> target. API: <code>GET /api/alert/overall/sales-acceleration</code> . |

| Date (UTC) | Summary                                                                                                                                                                                                                                                                                                                                                                         |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2026-07-10 | <b>QA Visit sortable headers:</b> Fleet + inspection history use the same <b>⬆ / ⬇ / ⬇</b> column sort as Red Flags (click cycles desc → asc → clear). Sort dropdowns removed.                                                                                                                                                                                                  |
| 2026-07-10 | <b>QA Visit tab polish:</b> Aligned filter bar + fleet/history tables. Machine search is a <b>searchable dropdown</b> (type to filter, pick to inspect / switch machine).                                                                                                                                                                                                       |
| 2026-07-09 | <b>QA fleet dates — Red Flags fix:</b> GET /api/alert/qa/summary now includes <b>latestByMachine</b> (chunked SC scan + per-machine audit matching, same as machine workspace). Red Flags / Overall QA cells prefer this over stale <code>byLocationKey</code> rows (fixes Jan vs newer visit). Fleet endpoint uses the same matcher.                                           |
| 2026-07-09 | <b>QA Visit fleet dates + latest fix:</b> Fleet tab shows <b>From/To</b> date filters (synced to machine drill-down). New GET /api/alert/qa/fleet returns latest SC visit per machine in range. Machine matching prefers <b>newest</b> visit, not stale exact-key row (fixes Jan vs June mismatch).                                                                             |
| 2026-07-08 | <b>QA Visit tab:</b> New sidebar route <b>/qa-visit</b> — fleet overview + machine picker; full filters (dates, SC location, sort), week-vs-week trend, history table, findings, PDF.                                                                                                                                                                                           |
| 2026-07-08 | <b>QA history coverage + table pan:</b> Machine audit search walks <b>~monthly SafetyCulture windows</b> so older months can appear. Modal default range <b>1 year</b> . Trend chart restored. Fleet tables: <b>◀▶</b> + drag-to-pan.                                                                                                                                           |
| 2026-07-08 | <b>QA visit popup — history + trend:</b> Wider modal with <b>inspection history table</b> (date / location / officer / score / PDF). Filters: <b>from-to dates</b> , location search, sort by date or score. <b>Week-vs-week score trend</b> sparkline (improving / declining / stable). Tap a row to load that audit's findings + PDF. Carousel tabs scroll sideways on touch. |
| 2026-07-01 | <b>QC visits MTD = admin only:</b> Popup and cell badge count <b>Admin</b> → <b>QA visit</b> manual saves per machine (Kuwait month), not SafetyCulture inspection count. SC score/last visit/PDF unchanged.                                                                                                                                                                    |
| 2026-06-28 | <b>GO CHECK — Slack DM:</b> Task Manager has no go-check write API; people-api sends <b>URGENT ACTION REQUIRED</b> to the scheduled operator via Slack DM (mailto fallback if Slack fails).                                                                                                                                                                                     |
| 2026-05-21 | <b>QA visit — SafetyCulture MTD + key findings:</b> Popup shows <b>QC visits MTD</b> (SafetyCulture audits in Kuwait calendar month). <b>Key findings</b> bullets: manual Admin summary first, else SC issue fields on latest audit, else AI/heuristic fallback. Cell shows MTD count badge when >0.                                                                            |
| 2026-07-01 | <b>Last clean — Task Manager daily checks:</b> people-api reads GET /api/v1/daily-checks (+ detail by id) per Postman <b>Daily checks</b> group. Popup shows Workflow upload time, <b>CC ✓ / Pending CC</b> from <code>vm_review</code> , media links. Vendon snapshot still used when no daily check row exists.                                                               |
| 2026-06-30 | <b>Last clean popup:</b> Vendon snapshot timestamp only — removed internal “Workflow API not available” footnote when snapshot is shown. <b>CC ✓ / Pending CC</b> still appear once Task Manager exposes cleaning uploads.                                                                                                                                                      |
| 2026-05-21 | <b>Last clean — Workflow CC status:</b> Cleaning popup prefers Workflow upload timestamp when API available; <b>CC ✓</b> (green) / <b>Pending CC</b> (red) pill when Command Center verification is returned. Comments + media links in popup. Until Workflow cleaning route ships, timestamp falls back to Vendon snapshot.                                                    |
| 2026-06-26 | <b>QA visit popup — monthly count:</b> Popup shows <b>Summaries this month</b> (Kuwait calendar month) with short description; count resets on the 1st. Admin tab unchanged.                                                                                                                                                                                                    |
| 2026-06-26 | <b>QA visit — manual summaries:</b> Removed OpenAI bullet fetch from QA popup. New Admin tab <b>QA visit:</b> pick machine, enter bullet-formatted summary (validated); monthly save count per                                                                                                                                                                                  |

| Date (UTC) | Summary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | machine (Asia/Kuwait calendar month). Popup shows latest manual summary + SafetyCulture score/officer + PDF download.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2026-06-13 | <b>QA visit score + AI summary + PDF:</b> QA column shows <b>score %</b> with green/amber/red chip. Popup: <b>3–5 bullet summary</b> from SafetyCulture report via <b>OpenAI</b> ( <code>OPENAI_API_KEY</code> on people-api); <b>Download report (PDF)</b> proxied from SafetyCulture (no external SC link required).                                                                                                                                                                                                                                                                          |
| 2026-06-24 | <b>Cleaning alert notifications (preview):</b> When last clean > <b>15h</b> ( <code>cleaningOverdue15h</code> ), <b>alert icon</b> on Last clean opens modal with contextual operator message for <b>Slack DM, Email, WhatsApp</b> , and <b>Workflow Received</b> (preview/copy only — no send from Alert).                                                                                                                                                                                                                                                                                     |
| 2026-06-24 | <b>Red Flags polish — operator, Last TX, fleet bar, sales popup:</b> Live operator — name in metric box + Late/Absent/Missing badge (no email/phone in grid); modal contacts are <b>icons only</b> ; no snapshot name flash before Task Manager load. <b>Last / tx</b> — 3-line date/time (no in-box label); sort uses Vendon timestamp. Sales today popup — <b>That day (same time)</b> shows — when prior-day data missing (not 0.000). Fleet revenue bar — <b>Yesterday overall</b> + vs-today trend on Today vs Yesterday preset. Backend: <code>not_scheduled</code> pill <b>Missing</b> . |
| 2026-06-23 | <b>Red Flags operator + modals + Last TX:</b> Operator cell uses Task Manager name fallback; <b>one combined modal</b> (contact + attendance). Cleaning/tech visit popups use snapshot + SafetyCulture instead of Task Manager stub errors. Last TX Vendon fallback window <b>7 days</b> . Modal click-through blocked ( <code>useAlertModal</code> guard).                                                                                                                                                                                                                                     |
| 2026-06-23 | <b>Task Manager attendance (Overall):</b> <b>Attendance</b> column uses Task Manager via people-api — batch <code>GET /api/alert/workflow/machine-attendance-map</code> (5 min refresh) and tap → <code>GET /api/alert/workflow/operator-schedule</code> modal (operator, today status, clock in/out, absent/late MTD). Requires <code>LEET_WORKFLOW_API_BASE</code> + <code>leet-workflow-api-key</code> secret on people-analytics-api. Upstream docs: <code>people-analytics-sync/docs/task-manager-api/</code> .                                                                            |
| 2026-06-22 | <b>Fleet revenue bar + Last tx + yesterday preset:</b> Running total bar uses full period labels (Today / Yesterday, etc.), <b>Change</b> column label, taller bar. <b>Last / tx</b> column renders in bordered metric box (64px, matches sales/freq cells). <b>Yesterday vs day before</b> sales stack shows trend when baseline comes from Vendon fallback (elapsed 0/null) or only baseline is present.                                                                                                                                                                                      |
| 2026-06-21 | <b>Preset sales + fleet revenue bar:</b> All compare presets merge elapsed + Vendon sales (yesterday vs -2d, today vs LW with Kuwait date math). Fixed <b>LW all zero</b> when elapsed empty but cache has data. <b>Fixed bottom bar</b> — fleet revenue total, baseline, <b>▲/▼</b> trend follows selected preset (Red Flags + Overall).                                                                                                                                                                                                                                                       |
| 2026-06-21 | <b>Red Flags — Last tx + popups + Call AM:</b> <b>Last / tx</b> column fills from Vendon <code>/last-transactions</code> when snapshot ISO is empty (same fallback as Overall). Trend popup — single open path via <code>.freqTrendOpen</code> button; row retarget only when <code>click</code> lands on <code>&lt;tr&gt;</code> (fixes double-fire). <b>Call AM</b> without Slack shows muted <code>linkGo</code> box + tooltip (missing user ID or team).                                                                                                                                    |
| 2026-06-21 | <b>YoY % + Sales today trend:</b> MTD YoY cell leads with large <b>% change</b> (green/red); KWD amounts secondary. Sales today box restores visible <b>↑/↓ trend %</b> (stronger size/weight in compact table CSS).                                                                                                                                                                                                                                                                                                                                                                            |
| 2026-06-21 | <b>Last Transaction column restored:</b> Red Flags — dedicated <b>Last / tx</b> column (sortable; in All, Sales, Alerts presets); removed from Machine sub-line. Overall — <b>Last / tx</b> moved after Operator activity (Essential, Sales, Ops presets).                                                                                                                                                                                                                                                                                                                                      |
| 2026-06-21 | <b>Popup fixes (iPad + trend + target owner):</b> Row tap uses capture-phase pointer target + synthetic click when Safari retargets to <code>&lt;tr&gt;</code> (Trend/Sales/Target/QA/cleaning/Call OP modals). Trend mini-card restores full <b>↑/↓ %</b> visibility (no ellipsis clip). Target modal shows <b>full admin location owner</b> immediately (profile prefetch + API) with contact bar below.                                                                                                                                                                                      |

| Date (UTC) | Summary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2026-06-21 | <b>Nav + sorting + modals + iPad taps:</b> Desktop sidebar always visible — <b>Icons / Labels</b> rail toggle only (full hide removed). <b>All valid table columns</b> sortable on Red Flags + Overall. Modals show row snapshot while API loads (target, cleaning, tech visit). <b>iPad/tablet:</b> pointerdown row guard + touch handlers so Trend, Sales, Target, QA, cleaning popups open reliably (no row detail stealing tap).                                                                                     |
| 2026-06-21 | <b>Target column + column composer:</b> Target <b>Left</b> KD no longer clips in table (wrap + wider box); tap opens full <b>WTD target modal</b> ( <code>GET /api/alert/targets/machine-detail</code> ) — daily target, today/yesterday %, remaining, WTD actual vs week target, prior-week trend, area owner contact. Column composer <b>expanded by default</b> on compact layouts; <b>Collapse</b> still available.                                                                                                  |
| 2026-06-20 | <b>Ops surface system + column composer:</b> Unified inset cards ( <code>ops-surfaces.css</code> ) — KPI strip, compare bar, sales banner, column composer presets, alerts, machine cards share border/radius/background. Column composer in <b>opsToolStack</b> with compare. Interactive preset cards, bundle switches, column ribbon; per-user save via <code>/api/alert/me/ui-prefs</code> .                                                                                                                         |
| 2026-06-19 | <b>Operator Activity + sales sort:</b> Dedicated <b>Operator Activity</b> column (last WEB door open); <b>Sales today</b> and <b>Sales MTD</b> as separate sortable columns (high → low, toggle off on second click). Operator column = contact only. Red Flags + Overall.                                                                                                                                                                                                                                               |
| 2026-06-19 | <b>PM roadmap completion:</b> Operator column shows <b>last WEB open</b> (relative) + email/phone; <b>Call OP</b> → <code>PersonContactModal</code> ; <b>QA</b> sort (latest/oldest) + <b>sales</b> sort (today + MTD cycle); cleaning <b>15h</b> banner + browser alerts + red-zone on cards/Overall; Overall <b>QA</b> cell opens report popup.                                                                                                                                                                        |
| 2026-06-18 | <b>Compare preset — Yesterday vs Day Before:</b> Red Flags <b>Frequency</b> trend/sort uses yesterday vs day-before incidents ( <code>daily-incidents-elapsed</code> ); Overall <b>Sales</b> stack shows Yest. vs -2d. <b>Leet Workflow scaffold:</b> proxy routes on people-api ( <code>/api/alert/workflow/*</code> ); Red Flags modals for operator attendance, GO CHECK task, cleaning detail, tech visit, Call OP DM; QA popup bullet summary. Requires <code>LEET_WORKFLOW_API_BASE</code> for live workflow data. |
| 2026-06-18 | <b>Red Flags regressions:</b> <b>Call OP</b> tap opens <b>PersonContactModal</b> (email, phone, Slack, WhatsApp) with grey icon slots when data missing; <b>QA</b> SafetyCulture cache processes more audits, EU report links, improved QC/template matching; operator contact API enriches phone/WhatsApp from Vendon.                                                                                                                                                                                                  |
| 2026-06-13 | <b>Red Flags — roadmap slice:</b> <b>Target</b> column (today % + remaining, WTD modal); <b>QA visit</b> column (SafetyCulture, tap for report); <b>operator last access</b> under live ops name; <b>cleaning &gt;15h</b> row highlight; <b>sales today</b> column sort. APIs: <code>operatorLastAccessAt</code> / <code>dailyTarget</code> / <code>cleaningOverdue15h</code> on snapshot; <code>GET /api/alert/qa/summary</code> , <code>GET /api/alert/targets/machine-detail</code> .                                 |
| 2026-06-17 | <b>Roadmap intake:</b> QA column (SafetyCulture parity), Target column (WTD + progress bars), cleaning 15h alerts, column sorting, operator last-access timestamp, QC report popup — see <a href="#">ALERT-ROADMAP.md</a> .                                                                                                                                                                                                                                                                                              |
| 2026-06-17 | <b>Red Flags — Operator column:</b> Shows <b>live ops name only</b> (click for email, phone, Slack, WhatsApp). <b>Cleaning schedule label</b> (e.g. “half cleaning”) appears on a separate muted line with tooltip — it is the Admin cleaning-rule name, not a second person. Fixed <b>strike email</b> resolution ( <code>operatorEmail</code> vs <code>strikeOperatorEmail</code> API mismatch) so Call OP and contact modals populate.                                                                                |
| 2026-06-13 | <b>Column help:</b> Header labels are the help target — hover (PC) or tap (iPad) opens the popover; no visible ? icon. <b>th title</b> kept as fallback. <b>Red Flags — Trend history:</b> Tap the <b>Trend</b> mini-card opens <b>today vs prior days</b> (same elapsed Kuwait clock) with trend %; respects compare preset                                                                                                                                                                                             |

| Date (UTC) | Summary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | (calendar days, same weekday chain, or WTD baselines). API: <code>GET /api/alert/red-flags/daily-incidents-elapsed</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 2026-06-10 | <b>Table headers:</b> Two-line grid (main + sub) so Red Flags / Overall column titles align consistently. <b>Overall — Peak hour:</b> From Vendon daily revenue cache (Kuwait busiest hour + vend count); API seeds today's cache on first load.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2026-06-10 | <b>Overall — Sales history popup:</b> Tap sales opens <b>today vs each prior day</b> (same elapsed Kuwait clock) — today vs yesterday, today vs 2 days ago, etc., each with trend %; table cell still shows today vs yesterday stack.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2026-06-11 | <b>Adaptive ops layouts:</b> Red Flags <b>Cards</b> view on iPad (toggle to Table). Overall <b>Essential</b> columns on iPad (8 cols) + <b>All columns</b> toggle. Overall table typography aligned with Red Flags ( <code>opsFleetTable</code> ). Sticky machine column on horizontal scroll.                                                                                                                                                                                                                                                                                                                                                                                           |
| 2026-06-11 | <b>iPad / touch UX:</b> Nav drawer on all viewports $\leq 1366\text{px}$ <b>and</b> touch-first devices (fixes sidebar stuck open on some iPads). Column help via tap ? ( <code>InfoTip</code> ) instead of hover-only tooltips. <b>Red Flags row detail</b> — structured sheet (why flagged, sales, credits, frequency, people, Go check). Larger tablet typography.                                                                                                                                                                                                                                                                                                                    |
| 2026-06-10 | <b>API fix:</b> <code>alert_routes</code> cache used <code>datetime.time</code> instead of <code>time.monotonic()</code> — broke remote-credits, daily-sales, and caused 503s. <b>Stitch v2</b> export applied (tactical tokens, table panel headers).                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2026-06-10 | <b>Red Flags / Overall dashboards:</b> Unified Stitch ops panel — KPI strip, compact controls, responsive table scroll, inline SVG nav icons (CSP-safe). Replaces mixed legacy cards on Overall.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2026-06-10 | <b>Stitch design system:</b> Applied Google Stitch export ( <code>docs/stitch-export/</code> ) — Inter + Space Mono, Dark Ops tokens, icon sidebar, Kuwait clock top bar, table headers. Real data/API unchanged.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2026-06-10 | <b>iPad / tablet layout:</b> Drawer nav only on <b>phones (<math>\leq 767\text{px}</math>)</b> — iPad portrait keeps fixed sidebar. Safe-area padding, <b>44px</b> touch targets, tablet typography on Red Flags / Overall tables (768–1194px).                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2026-06-10 | <b>Auth / session:</b> Ingress routes <code>/api</code> on <code>alert.theleetcub.com</code> to <code>people-api</code> (first-party cookies, same as Monitor v2). SPA waits for <code>/api/me</code> before showing login; Google <b>auto_select</b> when session expired but Google account active.                                                                                                                                                                                                                                                                                                                                                                                    |
| 2026-06-10 | <b>Responsive shell:</b> Sidebar <b>auto-hides</b> on <b>phones (<math>\leq 767\text{px}</math>)</b> — <b>Menu</b> in top bar opens off-canvas nav + backdrop; iPad and desktop keep fixed sidebar. <b>Red Flags / Overall tables:</b> Short uppercase headers (full text in tooltips), <b>horizontal scroll</b> instead of vertical letter-wrapping. <b>Overall — Sales:</b> <code>GET /api/alert/overall/daily-sales-elapsed</code> — today KWD through page load vs yesterday same clock window (Kuwait).                                                                                                                                                                             |
| 2026-05-08 | <b>Red Flags — Vendon KPI columns:</b> <b>Send credit</b> (remote credits sent today): $\leq 5$ green · $\leq 10$ orange · $> 10$ red. <b>Test credits</b> (dispense tests): $\leq 6$ green · $> 6$ red. <b>Vends resolved:</b> last failed vend today vs nearest remote credit — $\leq 5$ min green · $> 5$ min red · no fail green · unknown grey ( <code>people-api</code> <code>compute_vends_resolved_for_machine</code> + optional <code>machines</code> on <code>today-totals</code> ). <b>Last cleaning:</b> snapshot time + Admin <b>cleaning windows</b> — on schedule green · outside orange · no cleaning today red (shared <code>kuwaitCleaningStatus</code> with Overall). |
| 2026-05-08 | <b>Admin — Machines layout:</b> <code>adminCardMachineProfile</code> — Core <code>repeat(3, minmax(12rem, 1fr)) + min-height: 40px</code> on selects/inputs so labels line up and dropdown text does not clip; <b>Operating days</b> in <code>adminOperatingDaysBlock</code> (caption row + radios); <b>Remove</b> on cleaning/                                                                                                                                                                                                                                                                                                                                                          |

| Date (UTC) | Summary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | operator/staff hour rows uses <code>adminTimePairActionCell</code> + invisible <code>adminFieldCaptionSpacer</code> so the button lines up with time inputs; technician intro shortened to one line.                                                                                                                                                                                                                                                                                                                    |
| 2026-05-08 | <b>Overall — People Count / Footfall:</b> GET <code>/api/alert/overall/people-footfall</code> sums <code>people_in</code> (daily Videoloft buckets) from <code>people_analytics_records</code> for Kuwait <b>today vs yesterday</b> ; resolves cameras with the same embedded map as Monitor v1 <code>peopleCameraToMachineMap</code> , optional <code>alert_people_camera_map.json</code> / <code>ALERT_PEOPLE_CAMERA_MAP_JSON</code> , cached Videoloft device list, optional <code>ALERT_PEOPLE_FUZZY_MATCH</code> . |
| 2026-05-07 | <b>Overall:</b> No <b>Fleet table</b> subheading (count badge only). <b>Compact column headers</b> (short label + full title/note on hover), tighter spacing. <b>Admin · Location hours</b> + snapshot columns + Vendon fallback as before.                                                                                                                                                                                                                                                                             |
| 2026-05-07 | <b>Red Flags — Today / Trend:</b> Three icon boxes — <b>Score &amp; Gap</b> values use <b>green</b> at zero burden and <b>tiered red</b> by incident count; <b>Trend</b> uses $\Delta\%$ with <b>tiered red</b> on bad uptrends. <b>Gap</b> shows <b>↓0</b> (at green) or <b>↓N</b> (must <b>drop</b> N incidents to reach green); <b>—</b> if unknown. Header subcopy <b>gap ↓ to green</b> . Tooltips spell out direction vs baseline.                                                                                |
| 2026-05-07 | <b>Tables — text overflow:</b> Removed global <code>nowrap</code> on desktop table cells; <code>overflow-wrap / word-break</code> on all <code>th / td</code> so long machine names, emails, and alert text wrap inside cells instead of spilling past the table. Red Flags frequency mini-cards allow trend/ratio lines to wrap when narrow. Optional utility <code>.tableCellNoWrap</code> for rare single-line metrics.                                                                                              |
| 2026-05-07 | <b>Responsive UI:</b> Sidebar collapses to a <b>top horizontal nav</b> on mobile/tablet; page containers widened on desktop ( <code>pageShell</code> / <code>pageShellWide</code> ). Tables now wrap on small screens (less forced horizontal scroll), with tighter cell padding + fonts under 900px/720px.                                                                                                                                                                                                             |
| 2026-05-07 | <b>Red Flags — Frequency column:</b> Wider column reserved on the table (~14rem min) so three mini-cards keep <b>readable type</b> (clamp up to v1 ~11px counts / 9px trends); <b>card height</b> restored (~46px). Badges can wrap to two lines ( <b>VEND FAIL</b> ).                                                                                                                                                                                                                                                  |
| 2026-05-07 | <b>Red Flags — Frequency column:</b> Restored <b>Monitor v1</b> layout — three compact mini-cards ( <b>STALE · OFF · VEND FAIL</b> ): baseline count on top (e.g. 8/13 ), <b>trend %</b> under an inner divider (↑ red / ↓ green / flat grey). Header title <b>Frequency</b> + per-mode subtitle. Cells sized tighter than legacy defaults for fit.                                                                                                                                                                     |
| 2026-05-06 | <b>Red Flags: Call OP / Call AM</b> columns (Slack DM when <code>SLACK_*</code> ids configured; AM resolved from AM Plan location buckets; OP uses strike email → optional Slack user map, else mailto). Placeholder KPI columns show <b>?</b> . <b>Overall:</b> <b>?</b> + hover for disconnected metrics. <b>Admin:</b> catalog vs saved profile counts at top.                                                                                                                                                       |
| 2026-05-06 | <b>Red Flags board:</b> “Send Credit” → <b>Credits Sent</b> + new <b>Dispense Tests</b> (same criteria as Monitor drink tests). Earlier experiment: Score / Trend / Gap triplet — <b>superseded</b> by per-case Frequency mini-cards aligned with Monitor v1. <b>Overall:</b> Operating Hours now shows <b>hours only</b> (tag displayed separately) and Admin “Saved profiles” moved below the editor.                                                                                                                 |
| 2026-05-06 | <b>Fleet tags:</b> API adds <code>vendon_tag_source</code> ; Admin explains <b>how the tag was derived</b> (feed field / group / name parse). <b>Removed</b> sidebar <b>Documentation map</b> + Red Flags <b>xlsx/docs</b> UI copy. <b>Machines / Advanced</b> tables: <b>bounded scroll</b> , sticky header, wrapped cells. Prior Admin machine-profile row editor + machine tag column behavior unchanged.                                                                                                            |
| 2026-05-05 | <b>Admin → Location owner:</b> Vendon <code>prose</code> / <code>callInCode</code> , <code>split machine name</code> on <code>\  / -</code> for fleet codes; no <code>/location</code> names in tag datalist; API validates tags only; UI <b>does not prefill</b> legacy DB site text — hint when Vendon has no tag.                                                                                                                                                                                                    |

| Date (UTC) | Summary                                                                                                                                                                                                                                                                                                                 |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2026-05-02 | <b>Who can use Alert</b> — org email domain allowlist (server + UI); <b>leetAlertAdmin</b> can save access rules. Red Alert / machine <b>location</b> text prefers Vendon <b>tags</b> and machine tag fields before the generic Vendon <code>location</code> string (aligns with Admin “location owner” / machine tag). |
| 2026-05-04 | <b>Red Flags</b> = <b>xlsx</b> column order (through <b>Tech Visit</b> ); <code>alert.theleetclub.com.xlsx</code> in repo; <code>redFlagsWorkbookColumns.ts</code> ; placeholders for columns not in snapshot; machine / alert split; <b>Admin</b> tag/priority (other row).                                            |
| 2026-05-02 | <b>Timespan presets</b> (Today VS Yesterday default, +4) on Red Flags & Overall; Admin = data not on Vendon; five <b>figure SVGs</b> + PDF; Red Flags = Monitor Red Alert style.                                                                                                                                        |
| 2026-05-01 | <b>Who can use Alert</b> steps; Machines vs workbook Admin; PO doc + PDF raster.                                                                                                                                                                                                                                        |
| 2026-04-30 | Home hub; team access in Admin.                                                                                                                                                                                                                                                                                         |
