

Leet Alert — product scope (PM / PO)

For stakeholders: overview of routes, capabilities, and access. **Living app:** alert.theleetclub.com (confirm ingress with engineering). **Repo:** `monitoring-app/apps/alert-theleetclub-com/`.

Regenerate PDF: from this folder, `npm run doc:pdf` (uses WSL/bash if needed). Commit `PRODUCT-PROTOTYPE.md`, `docs/product-prototype/visual-prototype.svg`, and `PRODUCT-PROTOTYPE.pdf` together.

Note: The shipped UI does not show “prototype” or lab wording; wireframes below are documentation only.

Routes & capabilities

Route	Area	What users get
<code>/</code>	Entry	Sends signed-in users to Home .
<code>/login</code>	Login	Google sign-in only.
<code>/home</code>	Home	Hub: cards to Red Flags, Overall, and Admin (if role allows).
<code>/red-flags</code>	Red Flags	Machines failing checks; reasons; compare controls for future KPIs.
<code>/overall</code>	Overall	Full fleet list; compare strip; granularity grows with backend.
<code>/admin</code>	Admin	Machines (workbook Admin columns), Who can use Alert (org admins: Leet Alert vs full Monitor), My access, Advanced (substring cleaning).

Permissions (one line)

Same rules store as Monitor (**people-api**): **view** → Red Flags + Overall; **manage Leet Alert** → Admin (machines, own access summary); **org access admin** → edit **Who can use Alert** and optional full Monitor grid. No Leet Alert entitlements → **No access** after sign-in — an admin must grant access.

Visual reference (wireframe)

Schematic SVG (not screenshots): login, shell + Home, Red Flags, Overall, Admin (sidebar sections + content sketch).

VISUAL REFERENCE (DOCS ONLY) - NOT LIVE UI PIXELS

Low-fi wireframe for PM/engineering alignment. Real app is dark-themed SPA with live APIs.

Update this file when IA or primary widgets change; then PRODUCT-PROTOTYPE.md + npm run doc:pdf.

N rows

Name	Id
Alpha Station	393033
...	

Figures 0-4: Login; shell + Home destination cards; Red Flags; Overall; Admin.

PO quick facts

- **Refresh:** lists refetch about every minute; users can **Refresh now**.
- **Admin IA:** side nav **Machines** → **Who can use Alert** → **My access** → **Advanced** (team access tab only if org admin).

Changelog

Date (UTC)	Summary
2026-05-02	PO-focused PRODUCT doc; PDF pipeline embeds wireframe raster; Admin wireframe labels match side nav (Who can use Alert , order).
2026-05-01	Admin Who can use Alert : steps 1-3 (Leet Alert-only vs full Monitor); Machines vs xlsx Admin; tab subtitles.
2026-04-30	Home hub, sidebar hints; team access in Admin; operator copy on Red Flags / Overall.
